

ABHINAY KHALATKAR

Full-Stack Software Developer · React · Next.js · TypeScript · Node.js · PHP · Craft CMS

Geilenkirchen, Germany · abhinaykhalatkar@gmail.com · linkedin.com/in/abhinay-khalatkar · github.com/abhinaykhalatkar · abhinaykhalatkar.de

PROFESSIONAL SUMMARY

Full-stack developer with 4+ years of professional experience in Germany, owning client platforms end to end as the sole engineer from UI handoff to production: solution design, React/Next.js and TypeScript frontends, Craft CMS and PHP backends, MySQL data modeling, security hardening, technical SEO, and deployment. Recent deliveries include a hybrid headless e-commerce platform for an industrial manufacturer — where my technical SEO rebuild grew organic traffic ~6x — and a rental-inquiry commerce platform for an equipment dealer. Outside work I build and operate an autonomous bilingual AI newsroom publishing ~100 verified articles per month on a self-hosted, local-first LLM stack costing €5–8/month to run.

CORE SKILLS

Frontend: React 18, Next.js, TypeScript (strict), JavaScript (ES6+), Redux Toolkit, Tailwind CSS, SCSS, Bootstrap, MUI, HTML5, CSS3

Backend & APIs: PHP 8, Node.js, GraphQL, REST APIs, Craft Commerce, Yii2 modules, Twig, Server-Sent Events (SSE)

CMS & Data: Craft CMS 5 (headless & templated), PIMCORE, MySQL, Firebase

Testing & Quality: Jest, Cypress (E2E), pytest, test-driven development, regression fixtures, pre-push quality gates

DevOps & Security: Git, Docker, CI/CD & release pipelines, Apache hardening (.htaccess, CSP, CSRF), Linux server administration, rsync deployments, Hetzner, AWS, Webpack, Composer, npm

AI & LLM Engineering: LLM orchestration & routing (Ollama, local + cloud models), multi-agent pipelines, schema-validated model output, GitHub Copilot, OpenAI Codex

Practices: System design, software architecture, performance optimization (SSR/CSR), technical SEO, GDPR-by-design development, release management

PROFESSIONAL EXPERIENCE

Associate Software Developer — scribble Werbeagentur GmbH

Apr 2024 – Present

Geilenkirchen, Germany (Hybrid) — digital agency; sole engineer per client project from UI design handoff to production

- Own client projects **end to end as the single responsible engineer**: architecture, frontend and backend implementation, database design, security hardening, testing, deployment, and post-launch maintenance.
- Architected a **hybrid headless e-commerce platform for an industrial manufacturer** — Craft CMS 5 / PHP 8.2 backend with a bilingual React 18 + TypeScript SPA (~29k LOC, strict mode) that server-renders all SEO-critical metadata (hreflang, per-language XML sitemaps, 4 JSON-LD schema types); the technical SEO rebuild **grew organic visitors from ~1,000 to ~6,000/month and search impressions from ~64,000 to ~105,000**.
- Designed a **zero-credential API boundary**: a same-origin GraphQL proxy that keeps schema tokens server-side, enforces CSRF on mutations only, and noindex-stamps API responses — no API credentials ever reach the browser.
- Executed an **in-place Craft CMS 4→5 migration of a live, order-taking commerce platform** for an equipment rental and sales company with zero data loss: rehearsed 153 database migrations on a production replica and ran a staged go-live runbook with per-stage rollbacks.
- Built a **B2B rental-inquiry checkout** on Craft Commerce (date-bounded rental options on cart line items, 3-step CSRF-protected flow) and a 30-module page builder whose full content schema — 47 entry types, 103 fields — is version-controlled YAML locked against production drift.
- Created a **security-first deployment console** (~7,700 LOC framework-free PHP 8 + JS): live build streaming over SSE to an in-browser terminal, isolated temp-release builds promoted via rsync only on success, automatic protection of production-only content, bcrypt auth with per-IP rate limiting, and a 'self'-only CSP — enabling fast, testable rollbacks across shared-hosting environments.
- Architected the agency's **reusable React + Craft CMS boilerplate** with a standardized Git workflow and upgrade paths; combined with the deployment console, **new projects reach deploy-ready in one day**.
- Maintain quality with **91 Jest test files and 23 Cypress E2E specs** behind pre-push hooks; ship GDPR-by-design: consent-gated storage writes, tracker-free cookie-minimal builds, and server-side consent validation on all public forms — accelerated by disciplined AI-assisted workflows (GitHub Copilot, OpenAI Codex).

Tech: React, TypeScript, Redux Toolkit, Next.js, Craft CMS 5, Craft Commerce, PHP 8.2, Yii2, GraphQL, Twig, MySQL, Tailwind CSS, Jest, Cypress, Webpack, Apache, rsync, Git

Software Developer — wob AG

Mar 2022 – Sep 2023

Viernheim, Germany (Hybrid) — B2B agency serving enterprise clients

- Built interactive React components and optimized multipage architecture for performance and server efficiency across production web experiences for enterprise B2B clients.
- Implemented responsive, cross-browser frontends (HTML, SCSS, Bootstrap, MUI) and enhanced UX with **Barba.js** page transitions and **Three.js** 3D graphics.
- Integrated PIMCORE CMS endpoints and supporting data flows, improving content operations and maintainability of CMS-driven experiences; managed Salesforce customer-journey workflows and data extensions for marketing campaigns.

Tech: React, TypeScript, JavaScript, PHP, PIMCORE, SCSS, Bootstrap, MUI, Three.js, Docker, Git

Jr. Frontend Developer (Internship) — AK Advertising

Jan 2018 – Mar 2018

Nagpur, India (On-site)

- Rebuilt a client website as a React single-page application, improving load performance; replaced static content with Firebase-backed dynamic data over REST APIs and implemented an e-commerce shop system.

Tech: React, TypeScript, Node.js, Firebase, REST APIs, HTML, CSS

SELECTED PROJECT

Doordarshi Newsroom — Autonomous Bilingual AI Newsroom

2025 – Present

Personal project, running in production (self-hosted) — publishes ~100 verified bilingual articles/month at €5-8/month total operating cost

- Designed, built, and operate a fully autonomous **English/German AI newsroom**: an eight-stage nightly pipeline (source discovery → claim verification → editorial standards → original writing → media generation → EU/DE legal compliance → translation → owner approval) delivering publish-ready bilingual article batches behind a strict human-in-the-loop publish gate.
- Built the self-hosted **multi-agent control plane**: Unix-domain-socket orchestrator with lease/heartbeat semantics, schema-validated JSON contracts between stages, per-task worker isolation, and policy-driven retries — a failed stage never corrupts a batch.
- Engineered **cost- and privacy-aware LLM routing** that keeps monthly costs under €8: local-first model gateway (Ollama + external GPU node) with deterministic quality gates, escalation-only cloud lanes, and a self-healing circuit breaker proven in production against unstable hardware.
- Implemented **compliance by construction**: GDPR data minimization, fail-closed child- and victim-protection gates, paywall detection-and-refusal, synthetic-content labeling, and German press-code checks re-verified on the final package.
- Shipped a full **technical SEO stack**: Google News sitemaps, Atom/RSS with WebSub push, IndexNow integration, bilingual hreflang, JSON-LD structured data — indexing is event-driven on every publish.
- Engineering discipline throughout: per-stage contract documentation, pytest suites with regression fixtures from real incidents, end-to-end observability (artifact trees, health endpoints, failure telemetry), and secrets isolated from code and logs.

EDUCATION

M.Sc. Applied Computer Science — SRH Hochschule Heidelberg, Germany

2021 – 2023

Focus: software architecture, advanced databases, cybersecurity, UX engineering

Bachelor of Computer Application — Nagpur University, India

2018 – 2021

Data structures, software testing, SQL/PLSQL, computer networks, Java, C++, web fundamentals

LANGUAGES

English — fluent (working language) · German — A2-B1, actively improving · Hindi — native · Marathi — native
